Obi

obi_example.jpg

Example of an Obi under a belt.

Obis can be from the primary or secondary color charts of the appropriate faction. Obis should extend all the way around the body at or close to the natural waist with no visible fasteners. Obis can be up to 6 in (15 cm) wider than the belt (3 in/7.5cm above and below) excluding trim.

Embellishment allowed on obis are crinkles, trim, and patterns (please have LCC pre-approve pattern with GCC). Obis cut on the bias to crinkle should still be within approvable width.

Wrapped obis are allowed, so long as they have fasteners and are not mistaken for a sash.

The ends of an obi may be tapered where it fastens so long as the overall width of the obi remains even and the tapering is in the back.

Any vertical seams must be in the back or on the side.

Fabric panels used to extend the length should be added to the back so all seams are in back or on the side, whatever is least visible.

> Obis are optional under Darth Maul and Imperial Knight style belts.
